

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 1 Basic Properties and Hazards of Petroleum

1.1 Vapour pressure

True Vapour Pressure

Reid Vapour Pressure

1.2 Flammability

General

Flammable limits

The effect of Inert Gas on flammability

Tests for flammability

Flashpoint

Flammability classification of petroleum

1.3 Density of hydrocarbon gases

1.4 Toxicity

Introduction

Liquid petroleum

Petroleum gases

Safety Data Sheets

Benzene and other aromatic hydrocarbons

Hydrogen sulphide

Mercaptans

Cargo and bunker residues

Gasolines containing tetraethyl lead or tetramethyl lead

Biofuels

Inert Gas

Oxygen deficiency

1.5 Pyrophoric iron sulphide

Pyrophoric oxidation

Formation of pyrophors

Preventing pyrophoric ignition in inerted cargo tanks

1.6 The hazards associated with handling, storing and carrying residual fuel oils

The nature of the hazard

Flashpoint and headspace flammability measurement

Precautionary measures

Hydrogen sulphide hazard in residual fuel oils

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 2 Gas Evolution and Measurement

2.1 Hydrocarbon gas evolution and dispersion

Introduction

Gas evolution and venting

Gas dispersion

Minimising hazards from vented gas

2.2 Loading very high vapour pressure cargoes

Gas evolution

Special precautions with very high vapour pressure cargoes

2.3 Volatile Organic Compounds

2.4 Gas measurement

Provision of gas measurement instruments

Gas measurement instruments

Instruments for measuring hydrocarbon concentration

Instruments for measuring oxygen concentrations

Instruments for measuring toxic gases

Technologies used to measure flammable atmospheres, toxic vapours and oxygen

Testing and calibrating gas measurement instruments

Gas measurement instrument alarms

2.5 Sampling

Gas sample lines

Filters in sample lines

Gas sample procedures

2.6 Fixed hydrocarbon gas detection systems

Fixed hydrocarbon gas detection systems on tankers

Fixed hydrocarbon gas detection systems in terminals

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 3 Static Electricity

3.1 Principles of electrostatics

Summary

Charge separation

Charge accumulation

Electrostatic discharge

Electrostatic properties of gases and mists

3.2 General precautions against electrostatic hazards

Overview

Bonding

Avoiding loose conductive objects

Filters

Fixed equipment in tanks

Free fall in tanks

Water mists

Inert Gas

3.3 Other possible sources of electrostatic hazards

Discharge of carbon dioxide

Clothing and footwear

Synthetic materials

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 4 Managing Hazards and Risks for Ship and Terminal

- 4.1 Management system
- 4.2 Risk management
 - General
 - Risk assessment
 - Hierarchy of controls
 - Marine interface risks
 - Management of Change
- 4.3 Stop Work Authority
- 4.4 Lock-out/Tag-out
- 4.5 Control of hazardous energy
 - Hazardous energy
 - Hazardous energy controls
- 4.6 Simultaneous Operations
 - General
 - Managing Simultaneous Operations
 - Decision matrix
 - Matrix of permitted operations
- 4.7 Permit to work systems
 - General
 - Permit to work systems - structure

Permit to work systems - principles of operation

Permit to work forms

Work planning meetings

Toolbox talks

4.8 Personal safety

Personal Protective Equipment

Slip, trip and fall hazards

Asbestos

Personal hygiene

4.9 Preventing fire and explosion

4.10 Control of potential ignition sources

Naked lights

Smoking

Smoking at sea

Smoking in port and controlled smoking

Location of designated smoking places

Matches and cigarette lighters

Electronic or e-cigarettes

Notices

Galley stoves and cooking appliances

Funnel emissions

Spontaneous combustion

Auto-ignition

Equipment made of aluminium

Cathodic protection anodes in cargo tanks

4.11 Electrical equipment and installations in hazardous areas

General

Hazardous areas

Hazardous areas on a tanker

Hazardous areas at a terminal

Sources of ignition from electrical equipment

Standards of electrical equipment for use in hazardous areas

Inspection, maintenance and testing of electrical equipment

Changes to electrical equipment and systems

Electrical repairs, maintenance and testing at terminals

4.12 Portable electrical and electronic equipment

General

Electrical equipment on flexible cables

Air-driven lamps

Torches, lamps and portable battery powered equipment

Mobile telephones and pagers

Cameras

Other portable electrical equipment

Lithium batteries

4.13 Communications equipment

General

Ship's radio equipment

Tanker radar equipment

Automatic Identification Systems

Landline telephones

4.14 Tools

General

Hand tools

Electrical tools

Mechanically powered tools and grit blasting

Hydroblasting (high pressure water washing)

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 5 Fire Protection

- 5.1 Theory of firefighting
- 5.2 Types of fire and appropriate extinguishing agents
- 5.3 Extinguishing agents
 - Cooling agents
 - Smothering agents
 - Flame inhibiting agents
 - Clean agent fire suppression systems
 - Inert Gas system
- 5.4 Portable fire extinguishers
- 5.5 International shore fire connection
- 5.6 Water borne firefighting equipment
- 5.7 Protective clothing
- 5.8 Automatic fire detection systems
 - General
 - Types of fire detectors
 - Selection of fire detectors
 - Fire detection and alarm systems in terminals

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 6 Security

- 6.1 General
- 6.2 Threat and risk assessment
- 6.3 Security risk assessments
- 6.4 Cyber safety and security
- 6.5 Security plans
- 6.6 Responsibilities under the International Ship and Port Facility Security Code

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 7 Human Factors, Behaviour and Ethics

- 7.1 General
- 7.2 Identification and analysis of Safety Critical Tasks
- 7.3 Design
- 7.4 Risk assessment
- 7.5 Procedures
- 7.6 Leadership
- 7.7 Confidence to stop work or speak up
- 7.8 Fatigue
- 7.9 Manning levels
- 7.10 Individual training, experience and competence
- 7.11 Practising team skills
- 7.12 Human factors in investigation and learning

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 8 Alternative and Emerging Technologies

8.1 Definition

8.2 Examples

8.3 Due diligence process

Evaluation

Impact

Equivalency

Formal safety risk assessments

Stakeholder engagement

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

PART 2 Tanker Information

Chapter 9 Management of Safety and Emergencies

- 9.1 The International Safety Management (ISM) Code
- 9.2 Safety Management Systems
- 9.3 Work planning and permit to work systems
- 9.4 Hot work
 - Definition of hot work
 - Control of hot work
 - Hot work inside a designated space
 - Hot work outside a designated space
 - Hot work in dangerous or hazardous areas
- 9.5 Electric welding equipment
- 9.6 Other hazardous tasks
- 9.7 Management of contractors
- 9.8 Managing Simultaneous Operations
- 9.9 Hazards on ships with exposed transverse frames
 - Manifold platform
 - Sampling and measurement points
- 9.10 Repairs at a facility other than a shipyard
 - Introduction

General

Supervision and control

Pre-arrival planning

Mooring arrangements

Shore facilities

Work planning meetings

Permits to work

Tank condition

Cargo lines

Firefighting precautions

Safety Officer

Hot work

9.11 Shipboard emergency management

General

Tanker emergency plan

Action in an emergency

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 10 Enclosed Spaces

- 10.1 Introduction to enclosed space entry safety
- 10.2 Safety management for entering enclosed spaces
 - General
 - Managing controlled entry into enclosed spaces
 - Managing enclosed spaces not planned for entry
- 10.3 Identifying enclosed spaces
- 10.4 The hazards of enclosed space atmospheres
 - Oxygen deficiency
 - Presence of toxic and/or flammable gases
 - Risk from Inert Gas including nitrogen
 - Oxygen enrichment
- 10.5 General precautions
 - Contents
- 10.6 Authorisation of entry
- 10.7 Requirements for enclosed space entry
 - Control of entry into enclosed spaces
 - Atmosphere tests before entry
 - Enclosed space entry permit
- 10.8 Precautions during entry into enclosed spaces
- 10.9 Work in enclosed spaces
 - General requirements

Opening equipment and fittings

Use of tools

Use of electric lights and electrical equipment

Removal of sludge, scale and sediment

Use of work boats

10.10 Entering enclosed spaces with atmospheres known or suspected to be unsafe

10.11 Rescue and evacuation from enclosed spaces

Evacuation from enclosed spaces

Organising rescue and recovery from enclosed spaces

10.12 Cargo pumproom entry precautions

Cargo pumproom entry procedures

Cargo pumproom ventilation

10.13 Respiratory Protective Equipment

Self-Contained Breathing Apparatus

Air-line breathing apparatus

Emergency Escape Breathing Device

Equipment maintenance

Stowage

Breathing apparatus training

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 11 Shipboard Systems

11.1 Fixed Inert Gas systems

General

Sources of Inert Gas

Composition and quality of Inert Gas

Methods of replacing tank atmospheres

Cargo tank atmosphere control

Use during cargo tank operations

Precautions to be taken to avoid health hazards

Cargo tank protection against over/under pressure

Product carriers fitted with an Inert Gas system

Cold weather precautions for Inert Gas systems

Inert Gas system failure

Emergency Inert Gas supply

Inert Gas plant repairs

11.2 Venting systems

General

Tank over pressurisation or under pressurisation

11.3 Cargo and ballast systems

Operation manual

Cargo and ballast system integrity

Loading rates

Monitoring of void and ballast spaces

11.4 Power and propulsion systems

11.5 Vapour recovery systems

11.6 Volatile Organic Compound recovery systems

11.7 Stern loading and discharging arrangements

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 12 Shipboard Operations

12.1 Cargo operations

General

Setting of lines and valves

Valve operation

Pressure surges

Butterfly and Non-Return (check) Valves

Loading procedures

Loading static accumulator oils

Loading very high vapour pressure cargoes

Loading cargoes containing hydrogen sulphide

Benzene and mercury

Loading heated products/cold oil cargoes

Loading over the top (or loading overall)

Discharging procedures

Pipeline and hose clearing after cargo operations

Pumproom operational precautions

12.2 Stability, stress, trim and sloshing considerations

General

Free surface effects

Heavy weather ballast

Loading and discharge planning

Intact and damage stability

12.3 Tank cleaning

General

Tank washing risk management

Supervision and preparation

Tank atmospheres

Tank washing

Precautions for tank washing

Wash water analysis

12.4 Gas freeing

General

Gas free for entry

Procedures and precautions

Gas testing and measurement

Contents

Fixed gas freeing equipment

Portable fans

Ventilating double hull ballast tanks

Gas freeing in preparation for hot work

12.5 Crude Oil Washing

General

Advance notice

Tank washing machines

Control of tank atmosphere

Precautions against leaks from the washing system

Avoiding oil and water mixtures

Isolating the tank cleaning heater

Supervision

12.6 Ballast operations

General

Loading cargo tank ballast

Loading segregated ballast

Discharging segregated ballast

Ballast water exchange at sea

12.7 Cargo leaks into double hull tanks

Action to be taken

Inerting double hull tanks

12.8 Cargo measurement, ullaging, dipping and sampling

General

Measuring and sampling non-inerted tanks

Measuring and sampling inerted tanks

Measuring and sampling cargoes containing toxic substances

Closed gauging for custody transfer

Cargo tank monitoring systems

12.9 Transfers between ships

Ship to Ship transfers

Ship to barge and barge to ship transfers

Ship to Ship transfers using vapour balancing

Ship to Ship transfers using terminal facilities

Ship to Ship electric currents

12.10 Personnel transfer

12.11 Liquefied Natural Gas fuelled ship alongside a terminal

12.12 Lifting equipment

Inspection and maintenance

Training

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 13 Carrying and Storing Hazardous Materials

13.1 Liquefied gases

13.2 Ship's stores

General

Paint

Chemicals

Cleaning liquids

Spare gear storage

13.3 Cargo and bunker samples

Sample disposal

Sample storage

13.4 Other materials

Sawdust, oil absorbent granules and pads

Linseed and other oils

Garbage

13.5 Packaged cargoes

Petroleum and other flammable liquids

Dangerous goods

Entering holds and storage spaces

Portable electrical equipment

Smothering type fire-extinguishing systems

Firefighting precautions

Forecastle spaces and midship stores

Deck cargo

Barges

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 14 Special Ship Types

14.1 Combination carriers

General guidance

Slack holds in combination carriers

Longitudinal stress

Venting of cargo holds

Inerting of holds

Hatch covers

Tank washing

Carriage of slops when trading as a dry bulk carrier

Cargo leakage into ballast tanks

Testing of cargo tanks and enclosed spaces on dry bulk voyages

Cargo changeover checklists

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

PART 3 Marine Terminal Information

Chapter 15 Marine Terminal Administration

15.1 Marine Terminal Information System

Marine Terminal Particulars Questionnaire

Marine Terminal Management and Self Assessment

Marine Terminal Operator Competence and Training

15.2 Documentation

Terminal operating manual

Terminal Information Booklet

Documentation

Contents

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 16 Marine Terminal Operations

16.1 Limiting conditions for operations

Risk assessment

16.2 Electrical storms

16.3 Double banking

16.4 Tanker/terminal access

General

Provision of tanker/terminal access

Access equipment

Alternative means of tanker/terminal access

Routine maintenance

16.5 Over the tide cargo operations

Discharging over the tide

Loading over the tide

16.6 Operations where the tanker is not always afloat

16.7 Generation of pressure surges in pipelines

Introduction

Generation of a pressure surge

16.8 Reduction of pressure surge hazard

General precautions

Operational measures to reduce the risk of a pressure surge

16.9 Hot work in hazardous areas in terminals

16.10 Pigging

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 17 Marine Terminal Systems and Equipment

- 17.1 Electrical equipment
- 17.2 Lifting equipment
 - Inspection and maintenance
 - Training in the use of lifting equipment
 - Use of tanker lifting equipment
- 17.3 Lighting
- 17.4 Tanker/terminal electrical isolation
 - General
 - Tanker to terminal electric currents
 - Sea islands
 - Tanker/terminal bonding cables
 - Insulating flange
- 17.5 Earthing and bonding practice in the terminal

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 18 Cargo Transfer Equipment

18.1 Marine Loading Arms

Operating envelope

Forces on manifolds

Tanker manifold restrictions

Parking of arms

Ice formation

Mechanical couplers

Wind forces

Precautions when connecting and disconnecting Marine Loading Arms

Precautions while Marine Loading Arms are connected

Powered Emergency Release Couplings

Inspection, testing and maintenance

18.2 Cargo hoses

General

Types and applications

Performance

Marking

Flow velocities

Inspection, testing and maintenance requirements for cargo hoses

Hose flange standards

Operating conditions

Extended storage

Handling, lifting and suspending

Adjustment during cargo handling operations

Submarine and floating hose strings

Hoses used in Ship to Ship transfers

Electrical isolation

18.3 Vapour Emission Control Systems

18.4 Cargo transfer drainage and containment

Marine Loading Arm/hose clearing

Jetty deck containment

Hydrocarbon sump tanks

18.5 Emergency Shutdown systems

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 19 Marine Terminal Fire Protection

19.1 Marine terminal fire protection

General

Fire proofing

Location and spacing of fire detectors

Fire-extinguishing system compatibility

19.2 Alarm and signalling systems

Types of alarm systems

Alarm and signalling systems

Electric power sources

19.3 Detection and alarm systems at terminals

General

Control rooms/control buildings

19.4 Firefighting equipment

Terminal firefighting equipment

Portable and wheeled fire extinguishers and monitors

Terminal fixed firefighting equipment

19.5 Access for firefighting services

Contents

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 20 Emergency Preparedness and Evacuation

20.1 Overview

20.2 Hierarchy of emergency scenarios

General

Hierarchy of emergencies

Local emergency

Terminal emergency

Major emergency

Escalation

Assessing risks

Credible emergency scenarios

20.3 Terminal emergency planning - plan components and procedures

Preparation

Format

Control

Alarms and communications

Site plans and maps

Access to equipment

Road traffic movement and control

Outside services

Harbour authorities, vessel traffic control centres, police and fire services

Pilots

Rescue launches

Medical facilities

20.4 Spill response plan

Tiered response

Resource availability

20.5 Emergency evacuation and personnel escape routes

General

T-head jetties and finger piers

Sea islands

Tanker evacuation

Non-essential personnel

Primary and secondary escape routes

Availability of rescue craft

Survival craft

Lifesaving appliances

20.6 Training for emergencies and emergency exercises

20.7 Emergency removal of tanker from berth

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

PART 4 Ship/Shore (Tanker/Terminal) Interface

Chapter 21 Communications

- 21.1 Procedures and precautions
 - Communications equipment
 - Communications procedures
 - Compliance with terminal and local regulations
- 21.2 Pre-arrival exchange of information
 - Security information
 - Terminal to tanker
 - Tanker to terminal
- 21.3 Pre-berthing exchange of information
 - Tanker to terminal and/or pilot
 - Terminal and/or pilot to tanker
- 21.4 Pre-transfer conference
 - Tanker to terminal
 - Terminal to tanker
- 21.5 Agreed loading plan
- 21.6 Agreed discharge plan
- 21.7 Agreement to carry out repairs
 - Repairs on the tanker
 - Repairs on the terminal (communication)

Using tools while a tanker is alongside a terminal

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 22 Mooring and Berthing

22.1 Mooring safety

Snap-back

22.2 Security of moorings

22.3 Preparations for arrival

Tanker's mooring equipment

Terminal mooring equipment

Use of tugs

Emergency use of tugs

22.4 Berthing at jetty berths

Fendering

Type and quality of mooring lines

Management of moorings when alongside berth

22.5 Berthing at buoy moorings

Mooring Masters

Mooring at Multi Buoy Moorings

Mooring at Single Point Moorings

Management of moorings at buoy berths

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 23 Tanker and Terminal Precautions for Cargo Operations

- 23.1 External openings in superstructures
- 23.2 Central air conditioning and ventilation systems
- 23.3 Openings in cargo tanks
 - Cargo tank lids
 - Sighting, ullage ports and segregated ballast tank lids
 - Cargo tank vent outlets
 - Tank washing openings
 - Contents
- 23.4 Inspecting a tanker's cargo tanks before load
- 23.5 Marine cargo inspectors
 - Independent cargo inspection companies
 - Cargo inspection training and accreditation
 - Safe working in terminals and on tankers
- 23.6 Tanker and terminal cargo connections
 - Flange connections
 - Removing blank flanges
 - Reducers and spool pieces
- 23.7 Spills and leaks
 - General
 - Checks on quantity during cargo handling

Sea and overboard discharge valves

Scupper plugs

Spill containment

Tanker and terminal cargo and bunker pipelines not in use

Loading at terminals with Vapour Emission Control Systems

23.8 Firefighting while the ship is alongside a terminal

23.9 Firefighting while in proximity to other ships

Tankers at adjacent berths

General cargo ships at adjacent berths

Tanker operations at general cargo berths

Tugs and other craft alongside

23.10 Notices

Notices on the tanker

Notices on the terminal

23.11 Manning requirements

23.12 Control of vehicles and other equipment

23.13 Helicopter operations

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 24 Bunkering Operations

24.1 General

Preparation by the bunker supplier, including the bunker vessel operator

Bunkering safety management

Bunker procedures

24.2 Bunkering residual fuel oil or distillates

Precautions

24.3 Liquefied Natural Gas fuelled ships and Liquefied Natural Gas bunkering

Liquefied Natural Gas bunkering processes and procedures

Transfer equipment requirements for Liquefied Natural Gas bunkering

Additional information for Liquefied Natural Gas as a fuel and Liquefied Natural Gas bunkering

24.4 Ancillary substances

24.5 Alternative fuels

24.6 Bunker checklists

Bunkering checklist for residual fuel oil and distillates

The principles of the bunker checklist for residual fuel oil and distillates

The composition of the bunker checklist for residual fuel oil and distillates

Instructions for completing the bunker checklist

24.7 Liquefied Natural Gas bunkering safety checklists

ISGOTT

International Safety Guide for Oil Tankers and Terminals

Sixth Edition

Chapter 25 The Ship/Shore Safety Checklist

25.1 General

25.2 Composition of the Ship/Shore Safety Checklist

25.3 Example safety letter

25.4 Instructions for completing the Ship/Shore Safety Checklist

Pre-arrival

Checks after mooring

Checks before transfer - the pre-transfer conference

The declaration

Summary of repetitive checks during and after transfer

We make people better!
